

Tools Required:

Screwdriver

Helpful Tools:

Handle Removal Tool

Installation Instructions:

1. Remove the old handle from the stem. (Use handle puller if needed.)
2. Place the new metal handle adapter on the stem (as shown below, with prongs facing up), and tighten with screwdriver.
3. To install new handle: place new handle over the adapter, lining up the slots inside the handle with the prongs on the adapter.
(If additional height is needed to properly attach the handle, use the included inserts: Place one insert at a time on the handle adapter, until adequate height is achieved and the handle fits properly.)
Place the handle on the insert(s). Add inserts as needed.
Pry off handle button.
4. Select the screw that best fits the height and width required to install the new handle. (Screw assortment included.)
Place lock washer inside the top of the handle. Using a screwdriver, secure the handle by installing the screw.
5. Replace the handle button using the included hot, cold or diverter handle button.
